7:30 AM - SUNSET

KENNEL DIMENSIONS 50' X 18'

- The building will run from north to south with the office on the north end screening the kennel from 29th street. The existing Morton building that is on site is 40'x 60'. The kennel will be screened from the neighbors to the east by this Morton building. The residence to the east is the closest to the kennel and it will have the greatest sound barrier if the kennel is placed at this location. The kennel will be screened to the west by my residence. The south end where there is no residence in sight will be screened by 5' tall evergreens on 15' centers.
- There will be 12 indoor kennels that are constructed on a concrete floor. The side walls will be constructed with painted cinder block that will be 4.5' tall that will create an additional sound barrier and enhance the appearance. Attached to the cinder block will be fencing that will be powder coated to keep it from rusting. The outside runs will be constructed on concrete flooring with the same cinder block and fencing. The dimensions of the kennel inside and out will be 5'x5' interior and 5'x6' exterior providing plenty of room and comfort for the canines on site.
- The interior will have a plumbing to discard waste and eliminate odor. A water softener will be installed to eliminate hard water spots.
- There will be a bathtub installed to keep the dogs up on all hygiene needs.
- The indoor portion will have a heating and air conditioning system with a ventilation system to eliminate odors. The office will have a separate air conditioning system.
- The kennel and office will be equipped with electricity and water for superior hygiene and comfort for the animals.
- The exterior portion of the runs will have an overhang to shield the animals of excessive heat in the summer time.
